

# 2023 Minnesota Homeless Study: Hennepin County Minnesota Interview Data

## Background information

The following tables provide detailed interview data from the 2023 Minnesota Homeless Study, including in-depth information about the characteristics of people experiencing homelessness, their history and experiences, and the barriers that prevent them from obtaining housing.

For the **count** of people experiencing homelessness on the day of the study (October 26, 2023), see [Single Night Count of People Experiencing Homelessness](#) available at [www.mnhomeless.org](http://www.mnhomeless.org). Other reports from the 2023 Minnesota Homeless Study are published on the same site.

## Table organization

The following data tables represent aggregate responses to questions from the [2023 Minnesota Homeless Study interview](#). Data tables are organized by gender identity, days spent outside, and region.

- **Gender identity:** Respondents could choose one of four gender options: man, woman, non-binary, or another identity. Respondents were also asked if they identify as transgender or Two-Spirit. Responses from these two questions were combined into three categories of gender identity: man, woman, and transgender/non-binary/another identity. Statewide, 7-County Metro Area, and Greater Minnesota data tables report responses for all three categories. For regional data tables, the number of people who identify as trans, non-binary, or another identity is too low to report specific responses to most questions, but they are included in the totals.
- **Days spent outside/unsheltered:** Respondents were asked where they stayed in the previous month and they identified the number of days they were: unsheltered (including those who were outside or in a car or vacant building or some other place not intended for housing), doubled up with others, in a shelter, in housing, and in other locations. Data tables are divided by those who spent: 0 days unsheltered, 1-14 days unsheltered, and 15-30 days unsheltered in the previous month.
- **Region versus statewide:** Each regional report includes total percentages for the region compared to the statewide percentages.

## Who is included in these tables?

These tables represent adults age 18 and older; they **do not include unaccompanied minors (under 18)**. Youth under 18 will be represented in separate tables about the characteristics of homeless youth age 24 and younger.

The data reported in these tables apply only to the respondents for whom the question was applicable. Some tables report data that were collected only from those who answered a previous question in a certain way. For example, many questions about children are asked only of those adults who have children with them.

## How to read the data tables

**Use the percentages instead of “Ns.”** Sample weighting, such as we have performed with these data, uses calculations that can result in “fractional” persons. When we use computer rounding to adjust for this, numbers and percentages do not always add up exactly to the total for each category.

**The total number of responses is different for each question.** The “N” for each table includes the number of valid responses to that question. Missing data (cases when a respondent did not answer a question) are not reported or included in the percentages.

**There may be small differences in the medians reported in these tables versus those reported in aggregate reports.** This is due to inconsistencies in how medians are calculated within the SPSS statistical software.

## Weighted vs. non-weighted data

The 2023 interview data were weighted – or statistically adjusted – to reflect the actual number of sheltered homeless persons, compiled from site counts of people in shelters throughout the state on October 26, 2023. Shelter sites include emergency shelters and motel/hotel vouchers, domestic violence shelters, and transitional housing programs.

**Data from non-shelter locations are not weighted.** The actual number of homeless persons in non-shelter locations cannot be accurately estimated, so these cases were given a weight of 1.0. There is more information about weighting techniques on the last page of these data tables.

## 2023 Minnesota Homeless Study: Hennepin County Minnesota Interview Data Weighting Techniques

**Interviews conducted at shelters were weighted** – or statistically adjusted – to reflect the **actual number** of sheltered homeless persons, compiled from site counts of people in shelters throughout the state on October 26, 2023. Shelter sites include emergency shelters and motel/hotel vouchers, domestic violence shelters, and transitional housing programs.

**Interviews conducted in non-shelter locations are not weighted.** The actual number of homeless persons in non-shelter locations cannot be accurately estimated, so these cases were given a weight of 1.0.

### Adult data tables: Interviews and actual counts, by gender identity and total

	Men	Women	Trans/ Non-binary	Total
<b>Interviews</b> with adults in shelters (before being adjusted for weights)	382	293	22	697
<b>Counts</b> of adults in shelters (used for weighting adjustments)	929	936	37	1,902
<b>Interviews</b> of adults in non-shelter locations (not weighted)	375	187	23	585

Note. For comprehensive counts of people experiencing homelessness on October 26, 2023, see <https://www.wilder.org/mnhomeless/results/detailed-data>.

The weightings were calculated by a sample-balancing program available in the Princeton Statistical Program (P-STAT). Individual case weights were computed based on:

- Individual sites
- Gender (male; female; and trans, non-binary, and another identity)
- Minnesota regions (northwest, northeast, central, west central, southwest, southeast, and suburban metro) and counties (Hennepin, Ramsey, and St. Louis)
- Shelter types (emergency shelters and motel/hotel vouchers, domestic violence shelters, and transitional housing programs)

For questions on weighting techniques, contact Walker Bosch at [walker.bosch@wilder.org](mailto:walker.bosch@wilder.org).
